HGG

specialists
in 3D profiling

who *we* are

Short delivery times, high quality and cost savings are the reality of today throughout the steel industry. The focus is on the core and specialized work is outsourced.

Within the international steel industry, HGG is recognized as the undisputed specialist in 3D profiling. Developed and designed in-house since 1984, the HGG Group has produced a series of cutting lines that could be considered leading in the industry. Emphasis is placed on efficiency, flexibility and synergy.

With companies in the Netherlands, Germany and England, HGG operates as

an international subcontractor. In addition, transportable machines are available to work on site at any desired location in the world.

Outsourcing the welding preparation to HGG Profiling Contractors bv., results in significant cost savings on a variety of areas like welding material, welding time and the lead-time of a project.

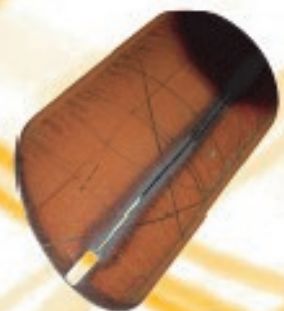

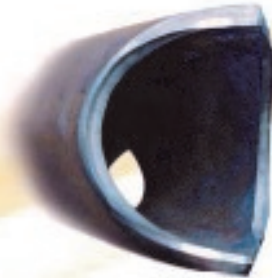

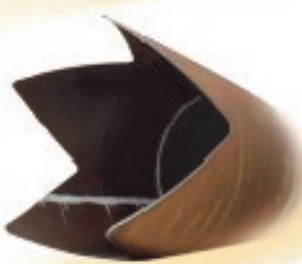

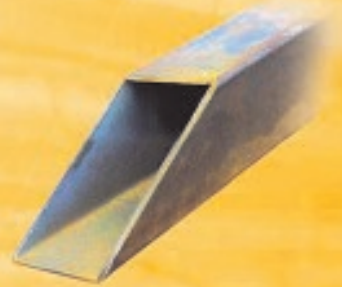

By using the machines and manpower of HGG, you benefit from optimal volume range, the highest degree of precision and a guaranteed unmatched quality. In addition, HGG continuously works on improvements and innovations around specific cutting techniques to realize every imaginable shape and contour (including weld-preparation).

A large variation processing applications is possible:

- Tubes ϕ 42x3 mm - 8.000x150 mm.
- SHS and RHS 80x80x3 mm - 600x400x30
- H-beams HEA 120 - HEB 550
- I-beams IPE 120 - IPE 550
- Other profiles: HP/Bulb profiles, T-bar, Angle line, Flat Strip, etc.

capacities

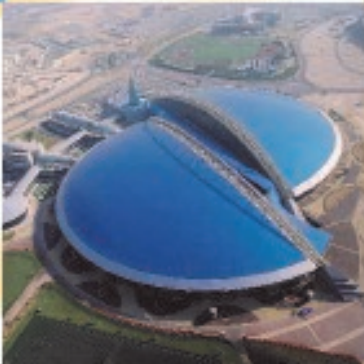

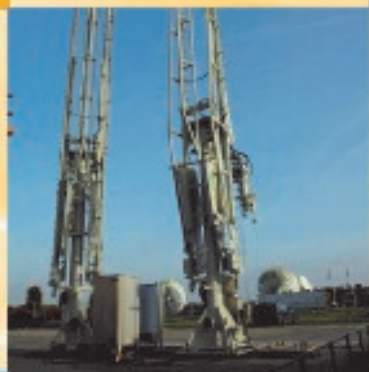

HGG operates according to the standards NEN-EN 1090 (E), AWS and API and our CAD/CAM systems link to AutoCAD, Tekla and ProEngineer.

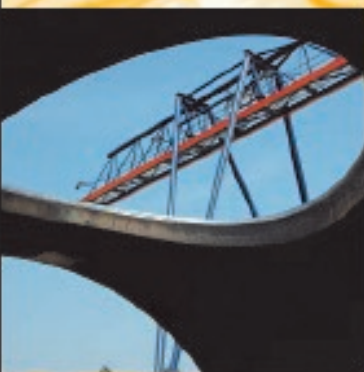

HGG machines are equipped with oxy-fuel and plasma burners. This results in possibility to process a variety of materials

and wall thicknesses with a maximum cutting angle of 70 degrees. In addition, reference lines, part numbers and texts are marked automatically.

HGG Profiling Contractors bv. works on site or from one of the HGG facilities. Materials are sorted, bundled and, on request, hard-stamped with the correct batch numbers before delivery, including the forms for traceability etc.

experience

Throughout the years HGG has been internationally active in the following industries: Steel Construction (stadium building, architectural works, etc.); Offshore Construction (oil, gas and wind), Petrochemical and Process Industry, Civil Engineering, Crane construction and Shipbuilding.

Partly due to its great experience, but above all by its powerful, high-quality solutions HGG as a subcontractor is involved in a number of distinctive projects

around the world. Therefore HGG has references from companies around the world, large and small.

HGG Profiling Contractors bv. is known for its short delivery times, cost-effective deployment, a deal is a deal guarantee and its knowledge and development of contours and welding details.

Unique are not just the HGG people that always work to secure your prestige. HGG also has a large capacity of machines available for you, **always and anywhere** in the world, to service you fast and efficient.
